DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/16/03 has been entered.

Claim Objections

2. Claim 12 is objected to because of the following informalities:

On line 2, it appears that the phrase "said electrode patterns" should read as --said central conductor patterns-- to be consistent with Claim 10 which recites the "patterns".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 17-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawada (JP 09-055607 of record) for the reasons of record.

Response to Arguments

5. Applicant's arguments filed 5/16/03 have been fully considered but they are not persuasive.

Regarding claims 17-18, applicant argues that the Kawada (JP '607) reference (see Above) figures 1 and 2 do not show a laminate module being disposed on a substantially flat surface of a composite base comprising an insulation member and conductor plates and instead shows a laminate body (60) on a shielding case section 70.

Contrary to applicant's arguments, Kawada does indeed teach a composite resin base (74) (see the machine translation, page 3, section 0023). The laminate structure (60) is mounted on the flat upper surface of the resin base and conductor plates are on the sides of both the laminate body and the resin base (e.g. see 66B, 66E, 74E, and 74B).

Allowable Subject Matter

6. Claims 1, 4, and 7-16 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach that the ground electrode of the composite base and at least one ground terminal are integral and that terminal electrodes and at least one input/output terminal are integral.
